

Next meeting to be with demo's

The next meeting of the SAIOSH Free State branch to be held on 22 September 2011 at Bloemfontein, is to deal with the hazard of working on heights as one of the most common causes of injury or death in specifically the construction industry. These incidents occur irrespective whether the height is 2 meter or 10 meter.

The presentation will cover the hazards, as well as practical application of precautionary measures, while a demonstration on the use off fall prevention and fall arrest equipment by specialists from NOSA will be held. This issue is applicable to members of all industries, both at office and on site.

For more info, contact Johan van Wyngaard at 051 403 0458 or 083 534 2377 or johanwyn@ruwacon.co.za.
