

GEECOM YOUR TRUSTED PROVIDER OF ENVIRONMENTAL PROTECTION SYSTEMS

GEECOM, a Southern African leader in the supply and installation of control and mechanical systems for dry and wet Electrostatic Precipitators has, for more than 27 years, been working with both large and medium sized industries to help them combat polluted air in their environment.

"Having been personally involved in the Environmental Control industry for more than 30 years, I can honestly say that the need for these systems has never been as prevalent as it is now," states Gustl Mischkulnig, managing director of GEECOM.

GEECOM prides itself in the provision of highly effective turnkey solutions that are tailor-made to meet the express needs of individual customers spread across the Southern African region. As a single source supplier extending from design to installation and then maintenance as well as related services of installed systems, the company is a trusted partner for

customers looking to harness the power of Electrostatic Precipitators as well as other emission control devices.

The company's team of dedicated experts currently work with organisations in the cement, pulp and paper, steel, chemical and petrochemical, as well as metallurgical and power generation industries.

"All of our systems are designed and manufactured locally making use of our computerised design tools. We ensure that every product we build is quality tested and checked before supplying to a client, and we achieve this through ongoing testing and the application of process models to ensure optimised operation of each product," mentions Gustl Mischkulnig.

GEECOM has secured an ISO9001-2008 certification and a top rating by NOSA. 🌟
